Edinburgh Open Research | Conference 2023

Time	Workshop Title	Lead Facilitator	Description
Wednesday 17th May			
0900 - 1100	**Crowdsourcers, Collaborators, and Co-Producers: The Communities of Participatory Research**	Neil Coleman	This workshop is an opportunity to consider the relationships between University researchers and their partners in participatory research – whether referred to as 'participants', 'community members', 'citizen scientists', 'crowdsourcers', or, quite simply, collaborators. It will be an opportunity to come together and consider the nature of these relationships, and the ways in which we can ensure that they are of value both for all parties involved. The workshop will consist of two parts. In the first half of the session, researchers from across the University will share insights from their own participatory efforts. The second half of the session will provide an opportunity for conversation and networking, with smaller breakout discussions facilitated by the speakers.
1000 - 1100	**Bingo! Raising the profile of study rigour in academic questioning**	Gillian Currie	Study rigour, the standards used in conducting and reporting research, is part of high-quality research, as recognised by the REF 2021 definition of research quality, which identified originality, rigour and significance as its key indicators. While originality and significance are often viewed as more exciting, it is vital to also embed rigour in research. During Good Research Practice Week 2022, we developed a co-creation project where we aim to improve awareness of the importance of rigour and how to achieve it. In this workshop we will co-create bingo cards with the researchers present ensuring that their knowledge and expertise shape a tool that is useful for their own research disciplines. These bingo cards which have questions that people can ask at academic talks, will be made open-access and available to anyone who wants to use them. These cards will published under a CC-BY-NC-SA share alike license.

THE UNIVERSITY of EDINBURGH

| 1200 - 1300 | **Understanding PhD Students' Perspectives on Open Research Practices and Research Integrity** | Emma Wilson | While open research and research integrity (OR/RI) practices are quickly becoming a vital part of being a researcher, formal training on these topics is not yet a mandatory part of PhD training in most scientific fields. PhD students' awareness of these topics therefore appears to be highly dependent on their supervisors' own interest and understanding and/or their research group culture, creating a 'postcode lottery'. Join us for some pizza and an informal discussion on how you got involved (or would like to get involved) in open research, and your experiences and perspectives on OR/RI more broadly. We also want to know about potential barriers to engaging with OR/RI and your ideas on how the University might overcome these. This session will be run by early-career researchers currently engaging with OR/RI within the University and members of a co-creation project on research integrity conceived as part of the University's Good Research Practice Week events in November 2022. |

We hope that you have enjoyed the Edinburgh Open Research Conference and will join us for future events.

The best way to keep up-to-date with all of the Open Research activities happening at the University is to sign-up to our Open Research newsletter here https://edin.ac/3MU36Bq, or by scanning the QR code on the left. You can also sign up directly to the Edinburgh ReproducibiliTea mailing list to get invites to monthly (online) meetings (right QR code).
